

Answer Key for Bonus Handout  
**April 2006 ■ Pathfinder Edition**

**Plants and Pals**

"Plant Partners" • pp. 4–9

1. Being rooted to the ground, plants can't move much.  
They need animals to spread pollen and seeds.
2. Bees, butterflies, birds, and flies are some of the animals that spread pollen.
3. Squirrels bury acorns, which are seeds, in different places.  
Uneaten acorns sprout and grow.
4. The Venus flytrap is the most famous carnivorous plant.
